FASTBAG

The machine

FASTBAG The **FASTBAG** is a machine designed to fill jute bags of gravel material type: pebbles, sand or other grained materials not too big.

Its simple use makes it a versatile and light machine, suitable to operate in the more adverse environments, thanks to a light and easily transportable structure. The machine is supplied complete with scale. Optional: on request "digital scale".

Operating principles

- Grasp the edge of the bag and support to make it internally to the profile (B).
- At this point press the pedal (C), the profile (B) drags the edge with it of the bag and thus allows the material to fall inside the bag; at this juncture always support the edge of the bag, until it leans to the dinghy (D).
- Once the bag has reached the desired load, release the pedal (C) to close the flow of material.
- At this point grasp the neck of the bag and close it in the desired method to.
