

VERSIONS

The machine can be set up with multiple files for a **maximum of 4**.
The **minimum distance** between the rows is about **60 cm**.

CLAMPS

The **clamps** holds the **stem** of the plant (from **4 to 35 mm** in diameter), until it is released into the ground.

Available **pliers** with variable dimensions and accessories

OPTIONAL

On request we can mount the application **stretch out hose**

For particularly **clay soils**, we have **track's breakers**, positioned in front of the open furrow.

File tracks

Rear fillers restore the oil on the sides of the plants.

PRODUCTION

Only **one operator** per row positions up to **1500 to 1800 plants / hour**, with maximum ease and precision.

CONFIGURATION	N. ROWS	DISTANCE	HP
1	-	-	50-60
2	75-150 cm	60-80	
3	75-150 cm	80-100	
4	75-150 cm	100-120

SD TRANSPLANTING MACHINE

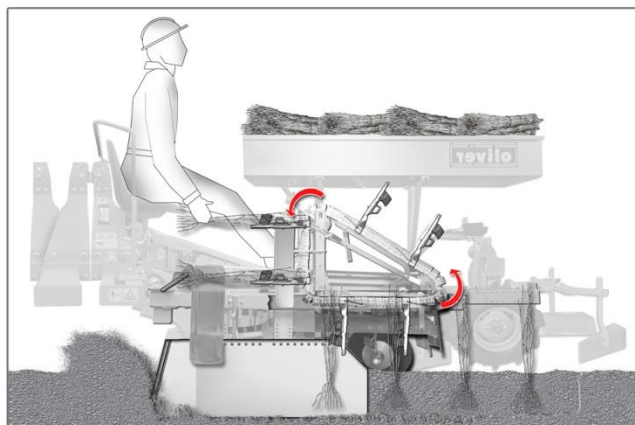

SD TRANSPLANTING MACHINE

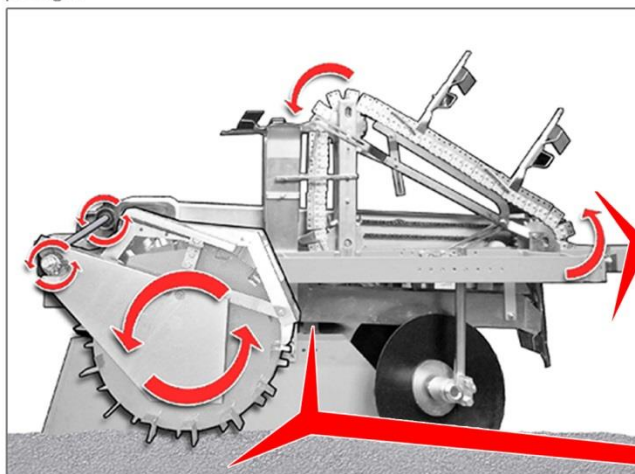

The SD Superdrive Transplanter is a machine designed for transplanting: **roostock, vineyards, vitro cultures, plants pots, lavender**

STRUCTURE AND OPERATION

STRUCTURE AND OPERATION

From the **working position**, the operator inserts the plants on the clamps positioning them in the hole created by the plough.

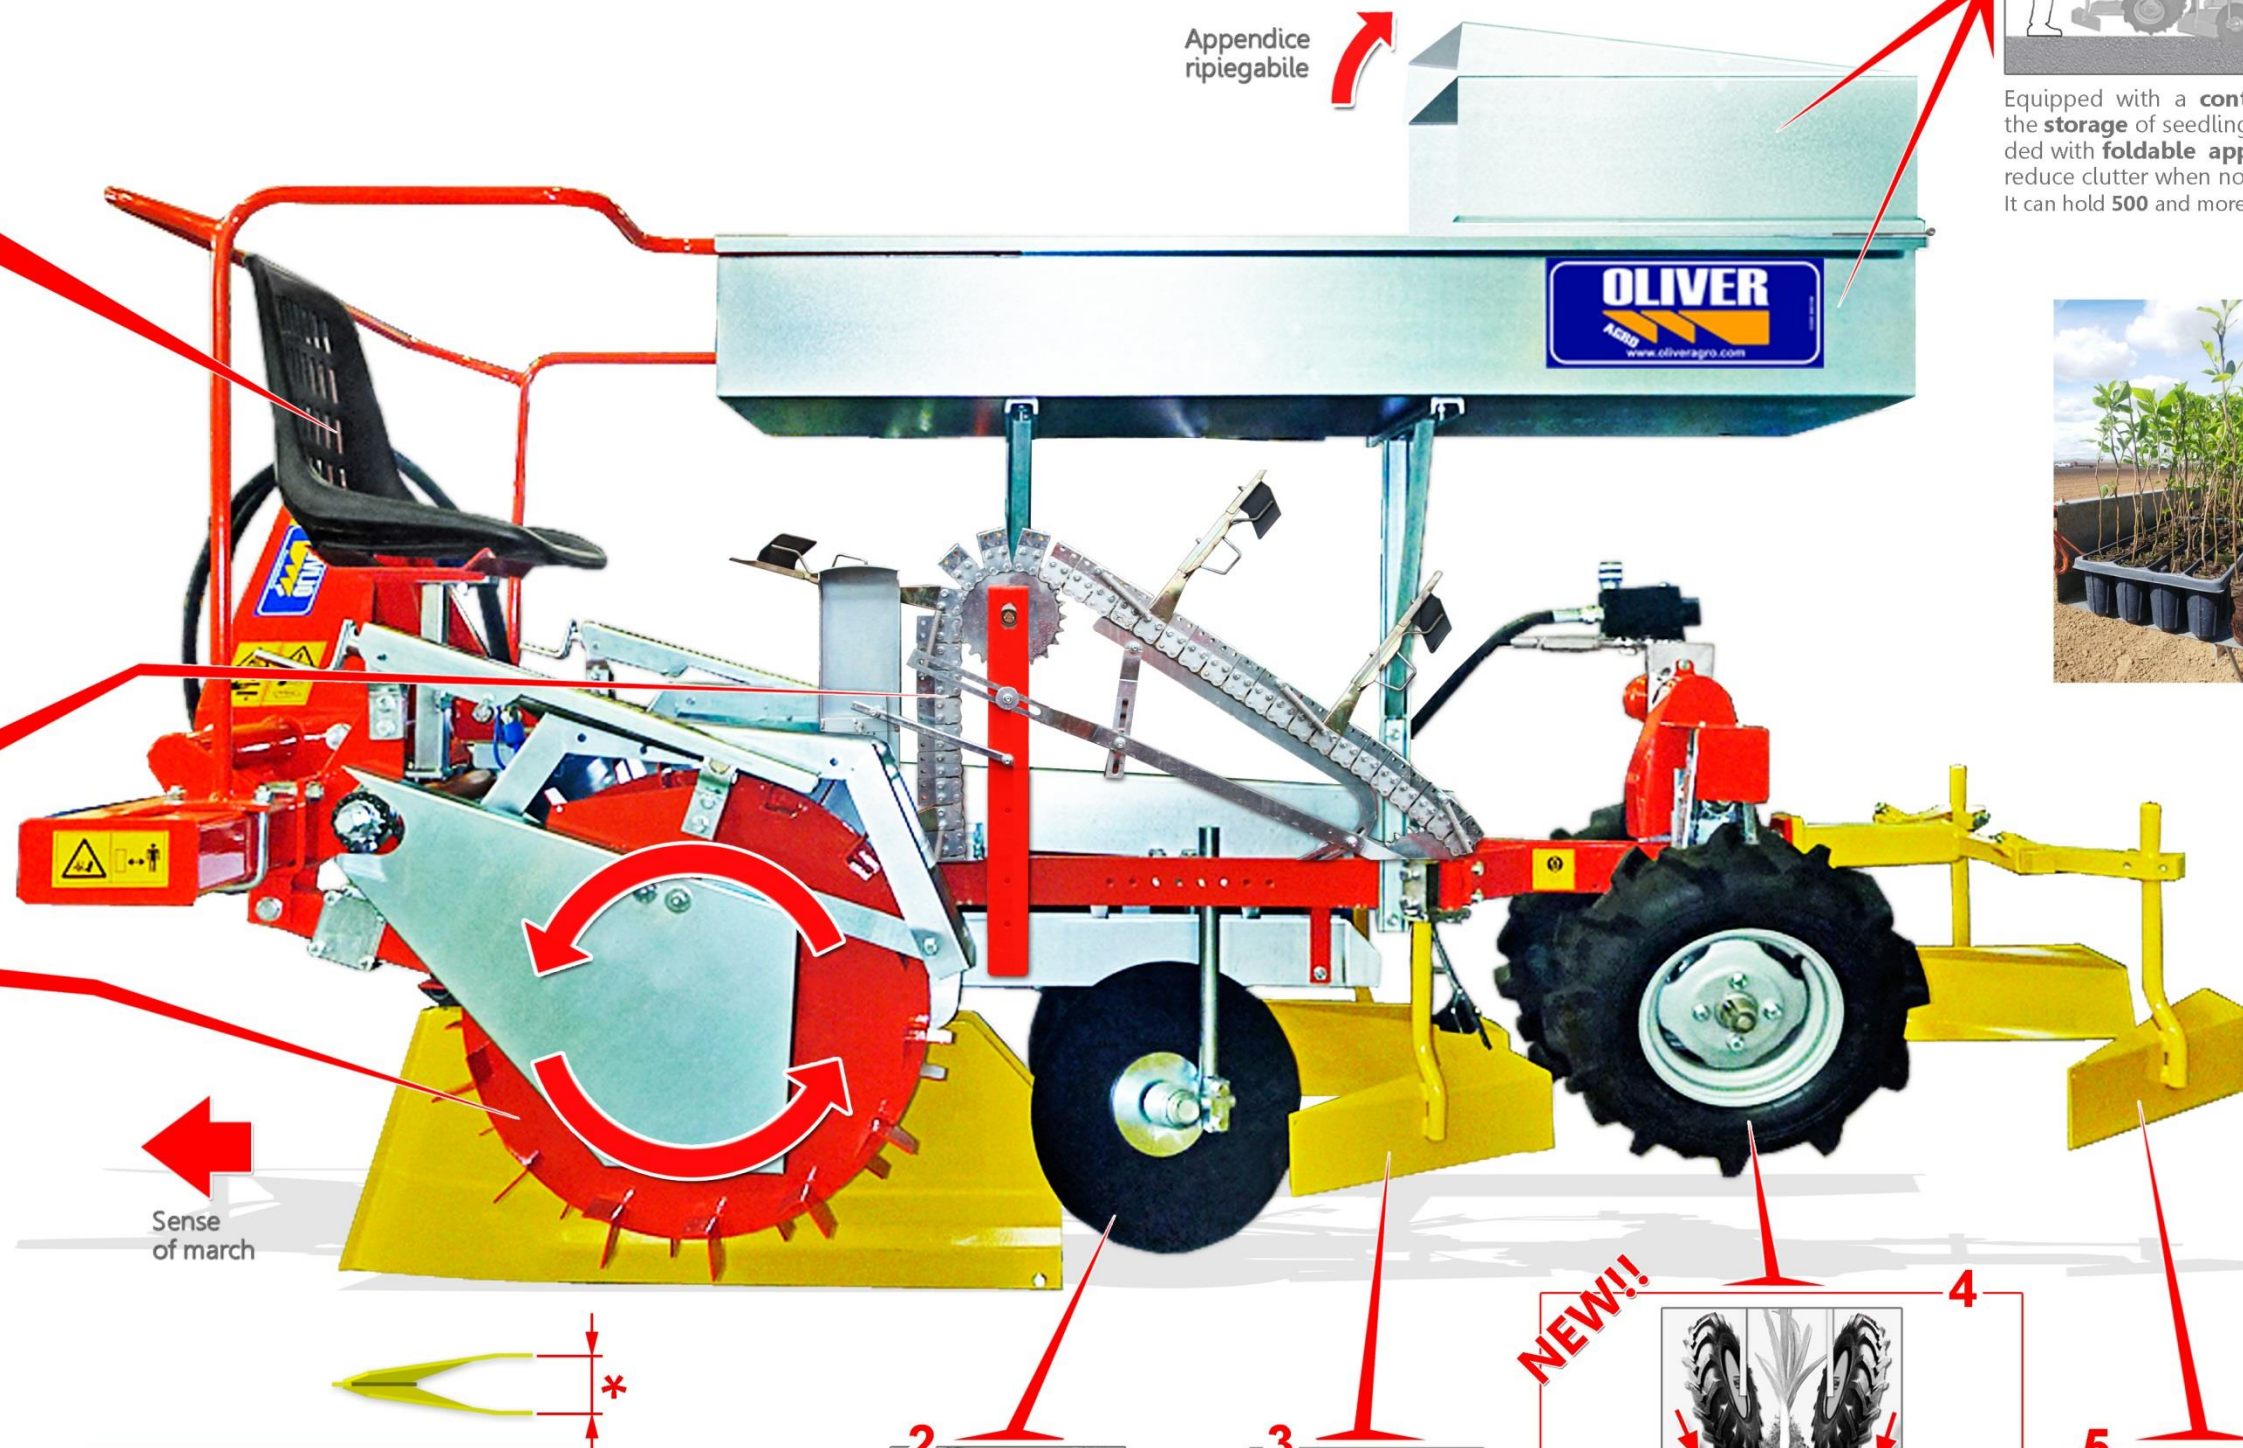

The two wheels, by gripping the ground, transmit the motion to the **chain**, where the **transplant clamps** are placed, at a distance varying from a **14 to 70 cm**.

For plant spacing > 70 cm up to a maximum of about **150 cm**, we apply a device, with a large excursion chain system.
N.B. Ideal for **transplanting vineyard**.

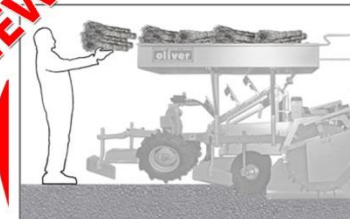

The **frame** is equipped with a **three-point hitch** and the multiple point is raised easily, thanks to the inlets for the **forks of the forklift**.

Appendice
ripiegabile

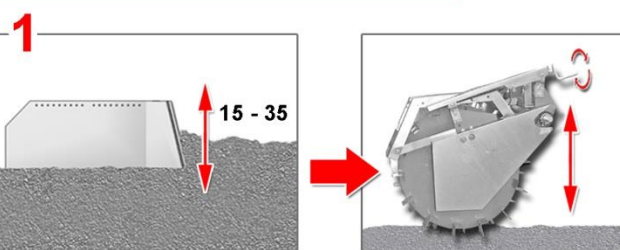

NEW!!

Equipped with a **container** for the **storage** of seedlings, expanded with **foldable appendix** to reduce clutter when not in use. It can hold **500** and more **roostock**.

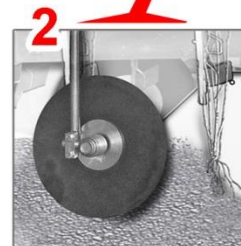

Sense
of march

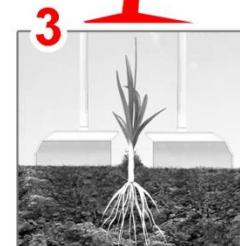

The **openers** open the soil for planting the plant.

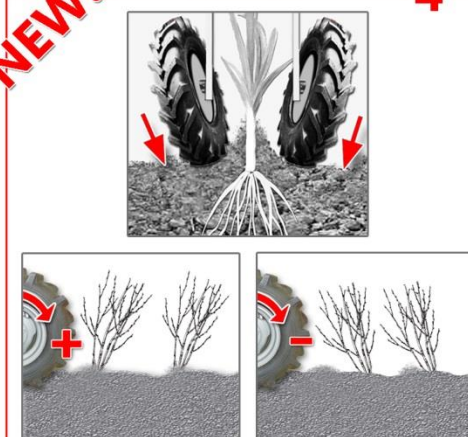

80 mm opening for **graft holders**
120 mm opening for **plants in vitro** and with **cubes**

The **discs (2)** compress the soil on the root of the plant, then the **rechargers (3)** cover the furrow stabilizing the plant on the ground.

NEW!!

**N.B. EXCLUSIVE SOLUTION
OLIVER AGRO**

Increasing or decreasing the **speed** of the **rear wheels (4)**, driven by hydraulic motors, the plant straightens up in a vertical position, canceling the operator's intervention.

The optional **rear tipper (5)** provide additional support for the plants.
